A-5020 SALZBURG AUSTRIA

Garijp, 30 juni 2009

To whom it may concern,

On the 23th of June 2009 I examined possible side effects of Chrysamed Vet ( Esbiothrin 0.06 %, Permethrin 0,12 % in 99.82 % Chrysa emulsion ) applied on the skin of 10 horses. On the left side of the neck an area of approximately 4 x 4 cm was clipped and sprayed with the Chrysamed emulsion. A non-clipped area of approximately 30 x 30 cm was included in the spraying. The horses were numbered from 1 -10 and pictures were made before spraying, 24 hours after spraying and 72 hours after spraying. No reaction of the skin was seen in any of the 10 horses. Not on the clipped skin and not on the non-clipped skin. No swelling, no redness, no pain reaction on palpation. At this moment the spraying was 7 days ago and no reaction has occurred. Two horses stabled at the clinic were sprayed over their whole body and no macroscopically visible reaction of the skin or any other side effect has occurred. Gender, age and species of the ten horses are listed in a Word addendum.

Yours sincerely S.Boerma DVM Equine Specialist Internal Medicines
